Question 3

1.Business concern

Question 3:What were the top Australian news topics over the last decade, and what can these say about the national conversation?

The significance of this question is that we are going to find which were the news topic australian prefer to heard and we can have insight of conversion topic which australian had in last decade.

keystakeholder :

NEWS AGENCY: Business of news ageny depends on the viwershi of channel.This question address the issue regarding the topics which australian audience prefered to watch and national conversion .The insight from this question would be helpful for the news agency to make strategy fr their progress in their industry.

Interpretion of question

The question will be interpreted in following way

Data collection : data has been collected from reliable sources (abc news)

Data cleaning and processing : data will be examine with checking rows and columns if there is any missing data then it would be either removed or being added based on the structure of data.The processing would take place based of the requirement of data since for this question data is required for only of decade therefore the data from 2010 to 2019 will only we considered

Data analysis : based on the processed data data analysis will take place in this we are using stopword removal,bigrands and trigands and limmatization , tfidf and lantent dirichlet .The stopword remover will remove the commonly used stopwords from the topics words like ,is ,for ,and ,will be removed.bigrands and tigrands will consider a word as whole word when two words occur frequently togthr like hong_kong,new_york.limmatization will consider the part of speech of a word and normalised the word .tfidf will be used to know the frequency of words other then which are being used in topic from past decades.THe words would be priotize based on the tfidf value .latent dirichlet allocation will be use to know the topic which were used in pass decade to form conversation the topic will be choosed based on the keywords .

visualisation : for visualisation i am going to use wordcloud which will display the words priotize by tfidf.pyldavisualisation was used to display LDA graph

2.Data collection

importing libraries and packages

```
In [2]:  import sys
         !{sys.executable} -m pip install spacy  #for limmatization
         !{sys.executable} -m spacy download en
         !{sys.executable} -m pip install gensim # for gensim packages
         !{sys.executable} -m pip install pyLDAvis
         import pandas as pd
         import numpy as np
         !pip install wordcloud # for visualisation
```

```python
!pip install nltk # for natural process language
import nltk
import re        #regular expression
nltk.download('stopwords') # for stopword removal
from wordcloud import WordCloud # for visualisation
import matplotlib.pyplot as plt #for visualisation
from nltk.corpus import stopwords

3.Data cleaning and processing

data cleaning

```
In [4]: data_news
        for heading in data_news.columns:    # for each heading in the dataframe
            print(heading)
```

```
publish_date
headline_text
```

```
In [5]: #since data type of date is integer type therefore  changing  publish date into date format
        data_news['publish_date'] = pd.to_datetime(data_news['publish_date'], format='%Y%m%d')
        reindexing=data_news['headline_text']
```

processing of data

since we required the data from only the past decade so we need to get data only from 2010 to 2019 therefore should have set index as data

```
In [6]: #set index as publish dat
        data_news=data_news.set_index(data_news['publish_date'])
        data_news=data_news.loc['2010-01-01':'2019-12-31']
        data_news
```

Out[6]:

	publish_date	headline_text
publish_date

2019-12-31	2019-12-31	we have fears for their safety: victorian premier
2019-12-31	2019-12-31	when do the 20s start
2019-12-31	2019-12-31	yarraville shooting woman dead man critically ...

675713 rows × 2 columns

4.Analysis

since we are concerned with only headline therefore making neww dataframe which consist of only headline_text

```
In [7]: new=data_news['headline_text']
        new
        new.reset_index(drop=True,inplace=True) # removing index which was set as date
        new
```

```

In [8]: stories_df=pd.DataFrame(new,columns=['headline_text'])
        stories_df
```

Out[8]:

	headline_text
0	12m degas stolen from museum
1	17 die in bangladesh bus crash
2	2010 to be drier after very wet 2009
3	37 catholic workers killed worldwide
4	600 hurt in philippine new year revelry

	headline_text
...	...
675708	vision of flames approaching corryong in victoria
675709	wa police and government backflip on drug amne...
675710	we have fears for their safety: victorian premier
675711	when do the 20s start
675712	yarraville shooting woman dead man critically ...

675713 rows × 1 columns

Tokenizing

tokenizing each sentence in headline_text

```
In [9]: tokens=list(tokenize(stories_df['headline_text'][0],lowercase=True)) # making the sentence in lower case
        tokens
```

```
Out[9]: ['m', 'degas', 'stolen', 'from', 'museum']
```

```
In [10]: tokens=list(simple_preprocess(stories_df['headline_text'][0]))
         tokens
```

```
Out[10]: ['degas', 'stolen', 'from', 'museum']
```

stopword removal

for removing stpwords we are using remove_stopwords ,simple_preprocess from gimsim package .The result will be stored in processsed_headline column

```
In [11]: stories_df['processed_headline']=[remove_stopwords(simple_preprocess(headline_text,min_len=3)) for headline_text in stories_df['headline_tex
         t']]
         stories_df
```

bigram and trigram

bigram can be saaid as two frequently occuring wordss together and trigram can be saaid as three frequently occuring words together .gensim phrase model is used to make bigram and trigram.the important argument to phrase aree min_count and threshold.the higher the value of his parameter the harder it becomes to combine a word.

```
In [12]: bigram = gensim.models.Phrases(stories_df['processed_headline'], min_count=5, threshold=100) # higher threshold fewer phrases.
         trigram = gensim.models.Phrases(bigram[stories_df['processed_headline']], threshold=100)
         bigram_mod = gensim.models.phrases.Phraser(bigram)
         trigram_mod = gensim.models.phrases.Phraser(trigram)
```

```
In [13]: print(trigram_mod[bigram_mod[stories_df['processed_headline'][0]]]) # printing the bigram and trigram for values
```

```
['degas', 'stolen', 'museum']
```

```
In [14]: def make_bigrams(texts):                                           # making a funcition for bigram
             return [bigram_mod[doc] for doc in texts]
```

```
In [15]: story_words_bigrams = make_bigrams(stories_df['processed_headline']) #applying bigram to the processed_headlines
         print(story_words_bigrams[:1])
```

```
[['degas', 'stolen', 'museum']]
```

lemmatize

lemmatisation is processss of getting together the inflected form of words so that they can be analysed as isngle item.in lemmatisation the part of speech of word would be decided first and then the normalization will take place.it will be different for different part of speech.

```
In [16]: # making a funcition for lemmatization
         def lemmatization(texts, allowed_postags=['NOUN', 'ADJ', 'VERB', 'ADV']):

             texts_out = []
             for sent in texts:
                 doc = nlp(" ".join(sent))
                 texts_out.append([token.lemma_ for token in doc]) # taking words for lemmatizing
             return texts_out
```

```
In [17]: nlp = spacy.load('en_core_web_sm', disable=['parser', 'ner'])
         data_lemmatized = lemmatization(story_words_bigrams, allowed_postags=['NOUN', 'ADJ', 'VERB', 'ADV']) # taking the output of bigram as input
         print(data_lemmatized[:1])
```

```
[['degas', 'steal', 'museum']]
```

tfidf

for tfidf we are giving token to words with use of dictionary Then we are using corpus for doing tfidf modeling the words will be sorted depending on the terms value from tfidf

```
In [18]: vocab=Dictionary(data_lemmatized) #dictionary
         print(vocab.token2id)
```

4 tfidf visualisation

we are using re for removing space wordcloud is used to display the cluster of wordss based on the tfidf term value The word which has higher priority would be displayed in bigger size the max_words is set to 50 so that only 50 most relevant wods can be displayed minimum length of word is set to 5 to avoid less significant words

```
In [22]:  Topics=','.join(map(str,list(stories_df['tfidf'].values)))
          #create wordcloud object

          wordcloud=WordCloud(max_words=500,contour_width=4,min_word_length=5,normalize_plurals=False)
          wordcloud.generate(Topics)
```

some improvement to assignment 1b

latent Dirichlet allocation

lda approach is used for topic modelling in which it consider each document as collection of topic and each topic as collection of words.It rearrange the keywords and topic to get a good composition of topic and keyword distribution

lda is provied with 3 parameter the corpus of the word,a dictionary of the words and number of topics to be represented

In [23]:
```python
lda_model = LdaModel(corpus=corpus, id2word=vocab, num_topics=20)
```

printing the number of topics with the words in topic and a number specifying its weightage in that topic

In [24]:
```python
pprint(lda_model.print_topics())
doc_lda = lda_model[corpus]
```

interpreting the topics

This can be interpretted as : (5, '0.104*"election"* + *0.083*"news" + 0.070*"abc"* + *0.059*"canberra" + ' *0.042*"take"* + *0.038*"warn" + 0.027*"city"* + *0.027*"state" + ' *0.027*"emergency"* + *0.024*"launch"') it means that topic 5 is represented by following keywords and their probability related to the topic.the probability represnt how the word is important to topic depedning on the words you can guess the topic could be and summarise .for topic 5 we can summarise that on poll or politics .we take it as politics.

likewise we can summarise other topics topic 0:politics and government topic 1: crime topic 2:politics and goverment topic 3:economy and goverance topic 4:misc topic 5:politics topic 6: world and calamities topic 7:crime and goverment topic 8: misc topic 9:politics and goverment topic 10:policy,politics and goverment topic 11:politics topic 12 : politics and goverment topic 13 :politics topic 14:crime and goverment topic 15: politics and goverment topic 16 :misc topic 17 :world politics topic 18:law and governance topic 19 :governance

Overall term frequency

Estimated term frequency within the selected topic

1. saliency(term w) = frequency(w) * [sum_t p(t | w) * log(p(t | w)/p(t))] for topics t; see Chuang et. al (2012)
2. relevance(term w | topic t) = λ * p(w | t) + (1 - λ) * p(w | t)/p(w); see Sievert & Shirley (2014)

Improved insight

The question is addressed suitably through the analysis and visualization done in both tfidf and Lda .from tfidf visualization we can see the top 50 words which were part of headlines of news watched by australian in a decade from 2010-2020.from this we can say that most Australian are interested in topics related to national interest since Australia and australian were the words which were occuring in headlines of news.with that other words like rural,police,world affairs,farmer,water can be seen in visualization to be occuring at frequent instancen.But this visualization was insuuficcent to predict the topic therefore lda was used .With Lda topic modelling took place which considered some keywords to form a topic and was presented in the visualisation.The

importancen of key word in topic can be derived from the probability of the keyword in topic which is displayed in printing of topic section.Lda has built 20 topics based on the combination of keywords and each keyword has certain weightage to a particular topic which can be seen in printing of topic section above .The topic can be intrepret as show in section above for interpretation of topic.From the visualalisation in LDA we can clearly see that there a a clusters of buble in the grapg which consist of 10-11 topics and there are few topics represented in bubble which can be viewed in visualisation are close to the cluster from the topics in clusters when we click on them and see interprettaion of it from intreption of topic section above we can tell that most of them are related to politics,policy and goverment.

INSIGHT FOR NEWS AGENCY: According to the analysis, we can have an insight that the viewers of ABC news share interest in the topic related to political updates, government rules and regulations, and also news related to policymakers.such kinds of analysis can help the news agency know what the targeted audience is interested in. From the analysis and visualization in both tfidf and LDA, it is clear that the Australian audience is more interested in local and national issues rather than an international issue. This insight can help news agencies in Australia to focus their strategy more on a national and local issue, however national issues like change in policy, rules, etc should get paid more attention and be the center of communication. With globalization and growing competitors in the industry, this insight from the analysis will give the news agency upper hand over the others. Such insight can help news agency increase their viewership and attract more business and finance for their company.

NATIONAL CONVERSION: from both the visualisation one for the 50 most used word and other for the topic it is clear that the national conversion is focused on national and local governance issue and changes .
